

Gradle Enterprise Case Study

Paxos Views Gradle Enterprise as Mission-Critical to their DevProd Strategy

Challenges/Pain Points

- Too much time spent waiting on build and test feedback either locally or during CI
- Inability to easily troubleshoot and determine the root cause of build, test and CI failures including flaky tests

Solution

- Build Cache to accelerate builds and tests (both locally and on CI)
- Build Scan™ to make troubleshooting more efficient
- Build & Test Failure Analytics and Performance and Failure Trends Dashboards

Results

- Payback from deploying Build Cache and Build Scan solutions was “immediate.”
- Paxos describes Build Cache as a “killer feature” and reported that time savings experienced by accelerating build and test cycle times has “dramatically improved developer productivity.”
- Paxos now views Gradle as a strategic technology partner that “exceeds our expectations for service and support and as a strategic technology partner.”

Paxos is a leading provider of fintech solutions

Paxos agrees that:

“Gradle Enterprise scales well and will meet the service-level expectations of any enterprise-wide deployment.”

“Gradle Enterprise is an important enabling technology for our digital transformation strategy.”
